- Problem Statement ID – 1605
- Problem Statement Title- Women Safety
Analytics-Protecting women From Safety
threats
- Theme- Miscellaneous
- PS Category- Software
- Team ID-
- Team Name- Innovators

◦ Proposed Solution (Describe your Idea/Solution/Prototype)

- The Women Safety Analytics System is designed as a comprehensive, real-time surveillance and analytical tool to enhance public safety, specifically targeting the protection of women in urban areas. This system leverages cutting-edge technologies like computer vision, machine learning, and gesture recognition to monitor public spaces, detect potential threats, and send immediate alerts to law enforcement and security agencies.

#DETAILED PROBLEM PROPOSED

SOLUTION

Gender distribution analysis
Detection of a lone women at night
Hotspots identification

#HOW IT ADDRESSES PROBLEM

Real-time threat detection
Data-driven safety planning
Enhanced security for women

#INNOVATION AND UNIQUENESS

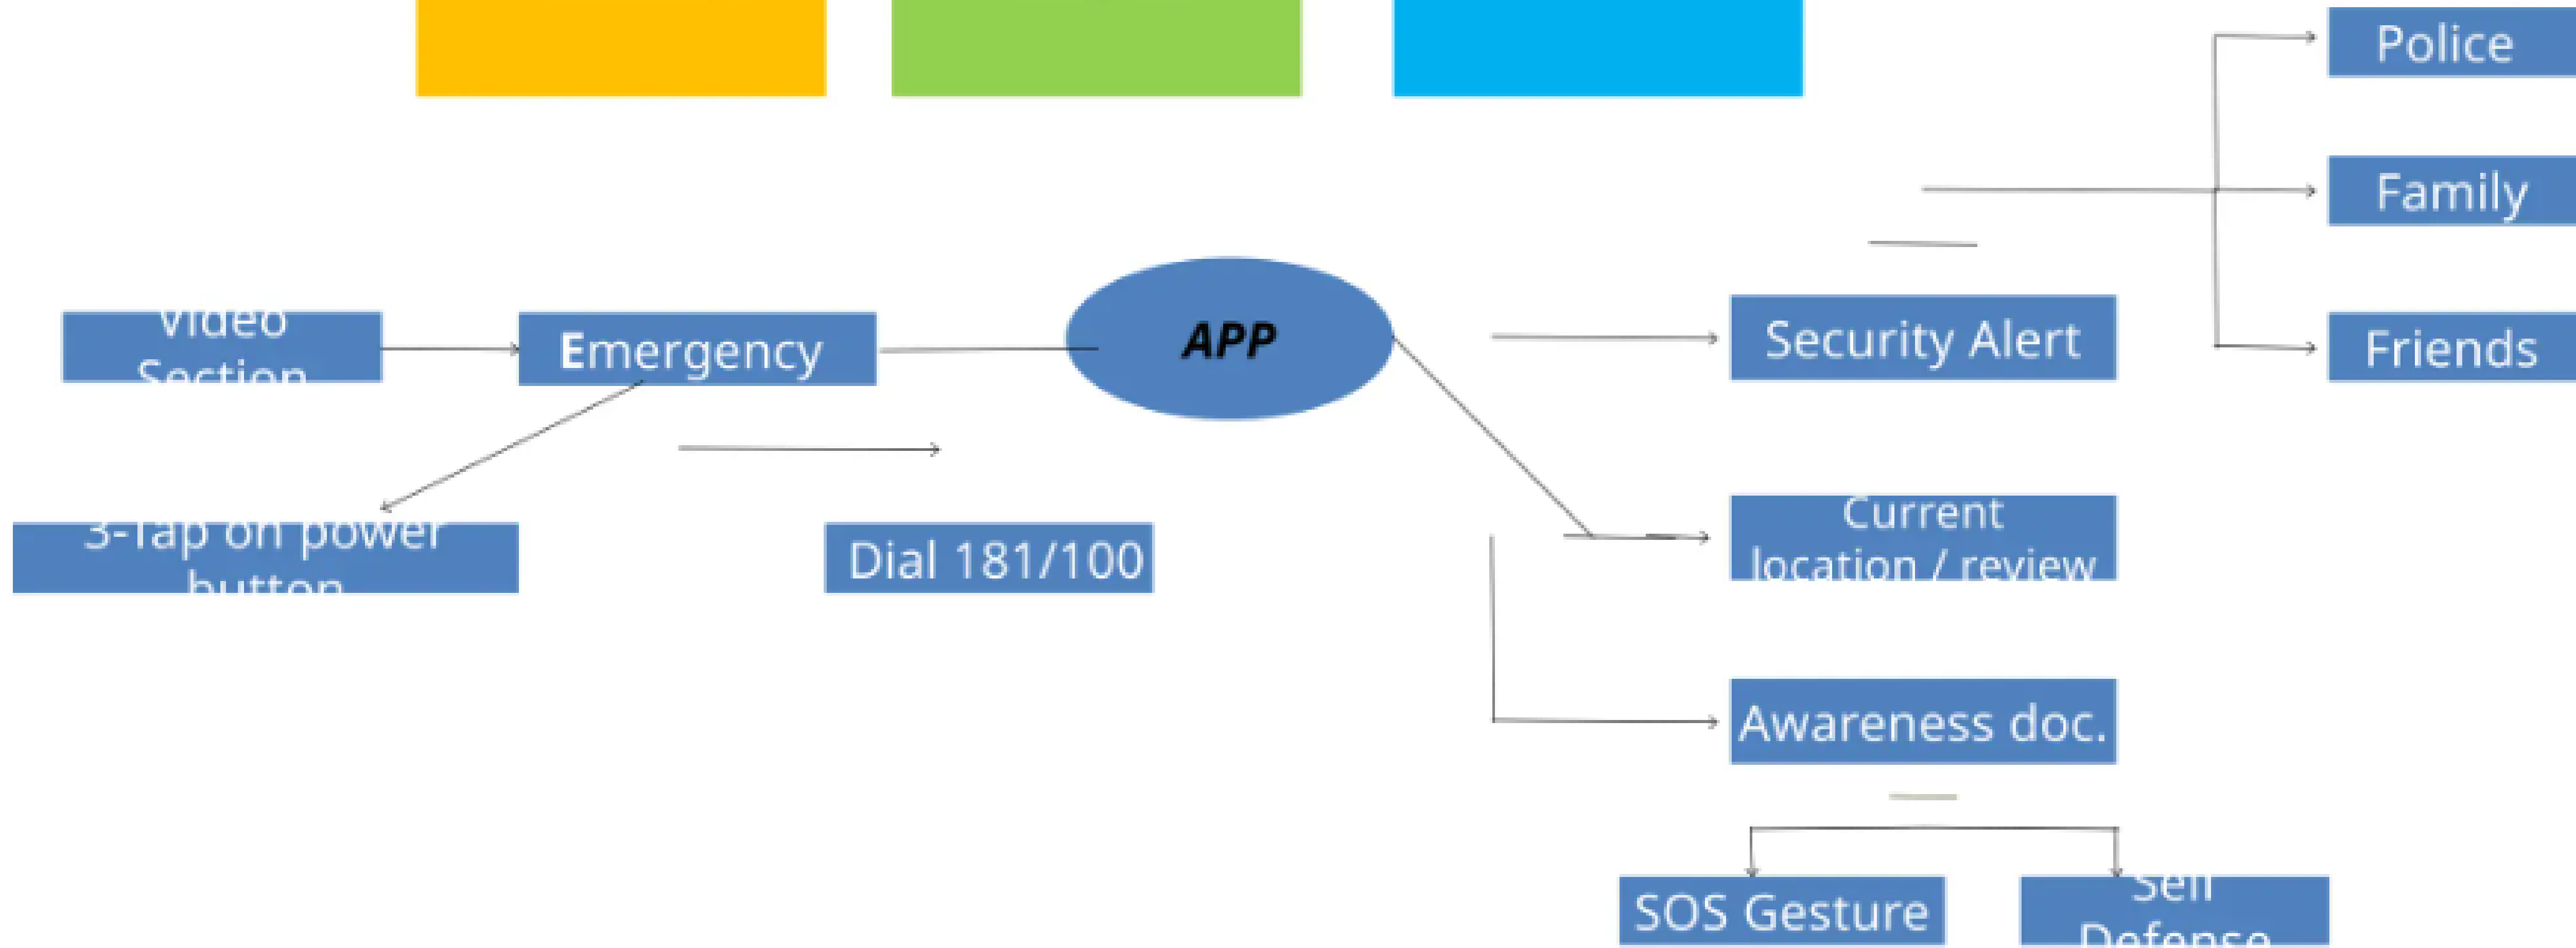

Integrated gender specific analytics
Gesture recognition for SOS
Real time analytics and feedback
Data driven insights for safety hotspots

Programing language
*Python
*Java script

Framework and Library
*Django/Flask
*Angular

Hardware
*HD camera
*Sensors

FEASIBILITY

- Technical feasibility
- Financial feasibility
- Social feasibility

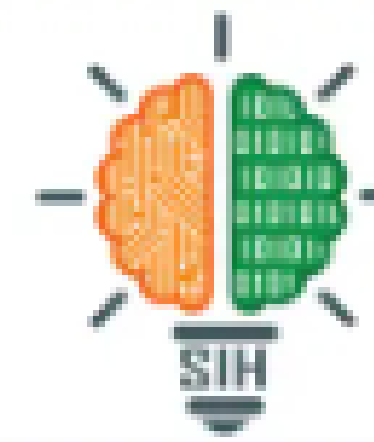

CHALLENGES AND RISKS

- Privacy concerns
- Data security and miss use
- Technical challenges

STRATEGIES FOR MITIGATING CHALLENGES

- Privacy protection
- Data security
- Algorithm accuracy

For women

- Increased Security
- Empowerment
- Increased Mobility

For Law Enforcement

- Crime Prevention
- Resource Optimization
- Data-Driven Policing

For Urban Communities

- Public Safety
- Social Cohesion
- Awareness

Social benefits

- Women Empowerment
- Community Well-being

Economic benefits

- Increased Productivity
- Boost to Tourism and Commerce

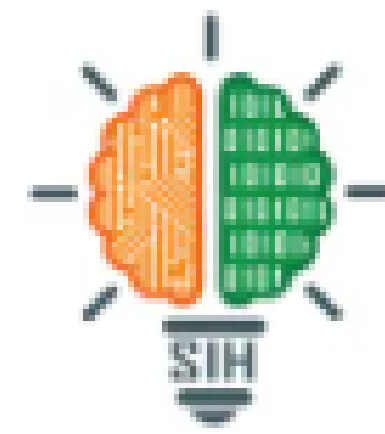

Environmental benefits

- Sustainable Urban Planning
